

Integrated Assessment of Climate Change Mitigation and Adaptation Impacts at Landscape level in the Austrian Mostviertel Region

**Martin Schönhart¹, Thomas Schauppenlehner², Michael Kuttner³,
Mathias Kirchner¹, Erwin Schmid¹**

MACSUR Conference 2015

Integrated Climate Risk Assessment in Agriculture & Food

Wednesday 8th – Thursday 9th April 2015, University of Reading, UK

¹ Institute for Sustainable Economic Development, BOKU University of Natural Resources and Life Sciences, Vienna

² Institute of Landscape Development, Recreation and Conservation Planning, BOKU

³ Department of Botany and Biodiversity Research; Division of Conservation Biology, Vegetation Ecology, University of Vienna

Impact, mitigation & adaptation scenarios

Name	CC*	AEP*	CAP reform	Mitigation policies	Adaptation policies														
REF_2040	No	No	no dairy quota; no livestock premiums; regional farm payment; greening; LFA payments from 2008	<table border="1"> <thead> <tr> <th rowspan="2">Climate Change [CC] Scenario Name</th> <th colspan="2">Climate change in 2040</th> </tr> <tr> <th>Δ temperature (°C)</th> <th>Δ precipitation (%)</th> </tr> </thead> <tbody> <tr> <td>CS01</td> <td>+ 1.5</td> <td>0%</td> </tr> <tr> <td>CS05</td> <td>+ 1.5</td> <td>+20%</td> </tr> <tr> <td>CS09</td> <td>+ 1.5</td> <td>-20%</td> </tr> </tbody> </table>	Climate Change [CC] Scenario Name	Climate change in 2040		Δ temperature (°C)	Δ precipitation (%)	CS01	+ 1.5	0%	CS05	+ 1.5	+20%	CS09	+ 1.5	-20%	
Climate Change [CC] Scenario Name	Climate change in 2040																		
	Δ temperature (°C)	Δ precipitation (%)																	
CS01	+ 1.5	0%																	
CS05	+ 1.5	+20%																	
CS09	+ 1.5	-20%																	
CS[CC]_i	Yes	No	like REF_2040																
CS[CC]_m	Yes	No	like REF_2040	energy crops on set aside; subsidies for: landsc. elements, SRF, afforestation, cover crops, min. tillage and extensive land use															
CS[CC]_a	Yes	No	like REF_2040		no greening, subsidies for maintenance of steep slope grass land and irrigation														
CS[CC]_ma	Yes	No	like REF_2040	like CS[CC]_m	like CS[CC]_a														

* CC...climate change, AEP...agri-environmental program

Results – changes in average aggregated farm gross margins from climate change and policies

Northern landscape

Southern landscape

Gross margin: + product sales (plant, livestock) + subsidies + annuities for long-term investment
- variable costs (machinery, inputs and services, off-farm labor)

Results – changes in farm gross margins from climate change and policies

Northern landscape

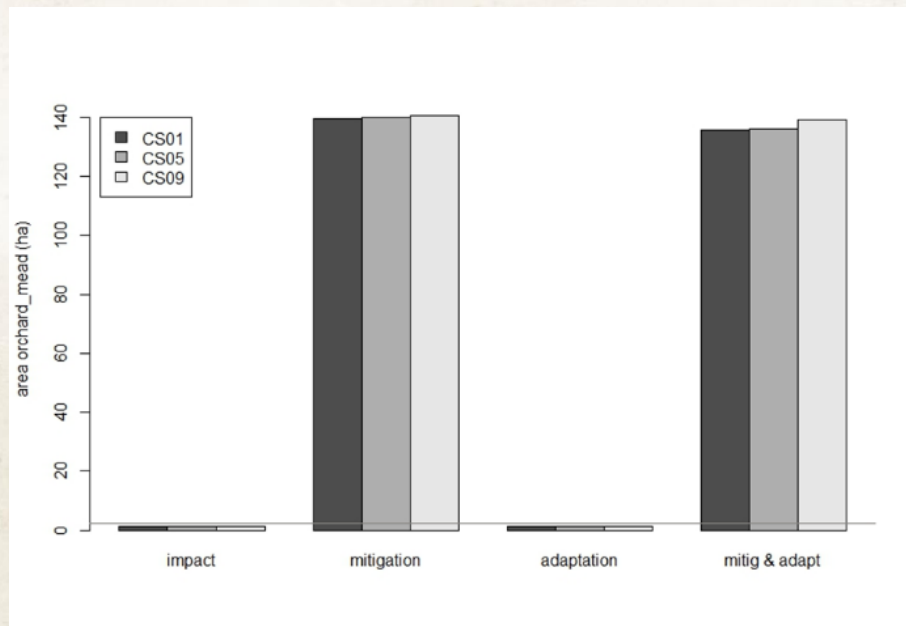

Results – land use change from climate change and policies

Northern landscape – fallow land

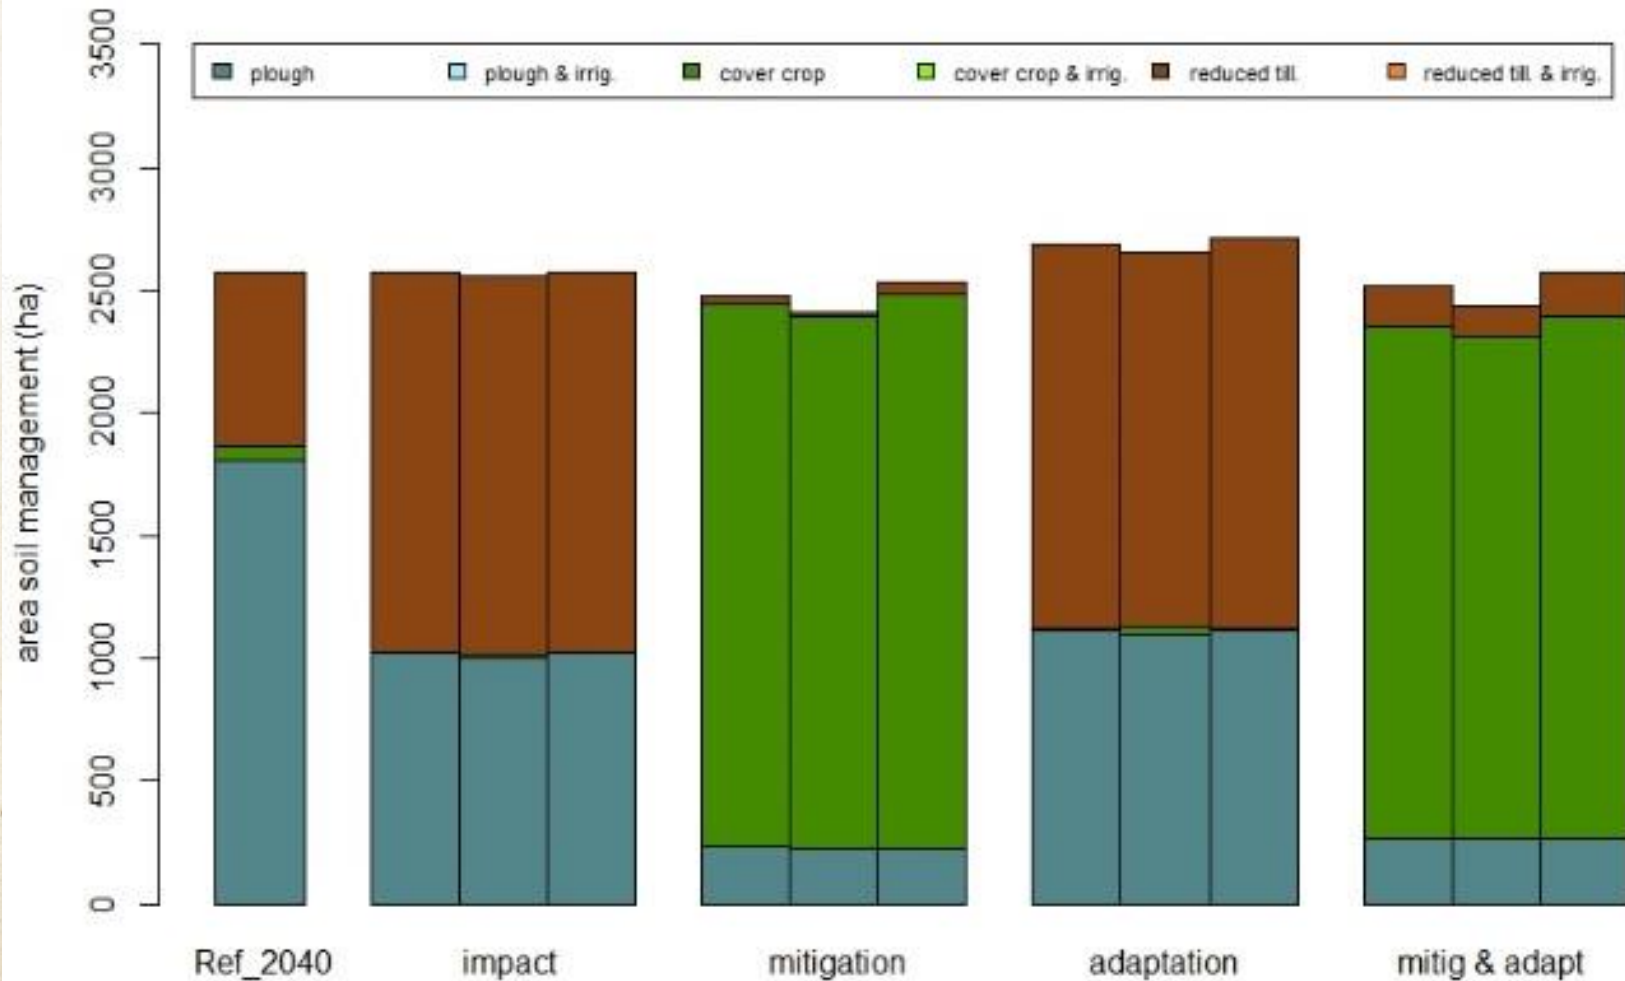

Southern landscape – orchard meadows

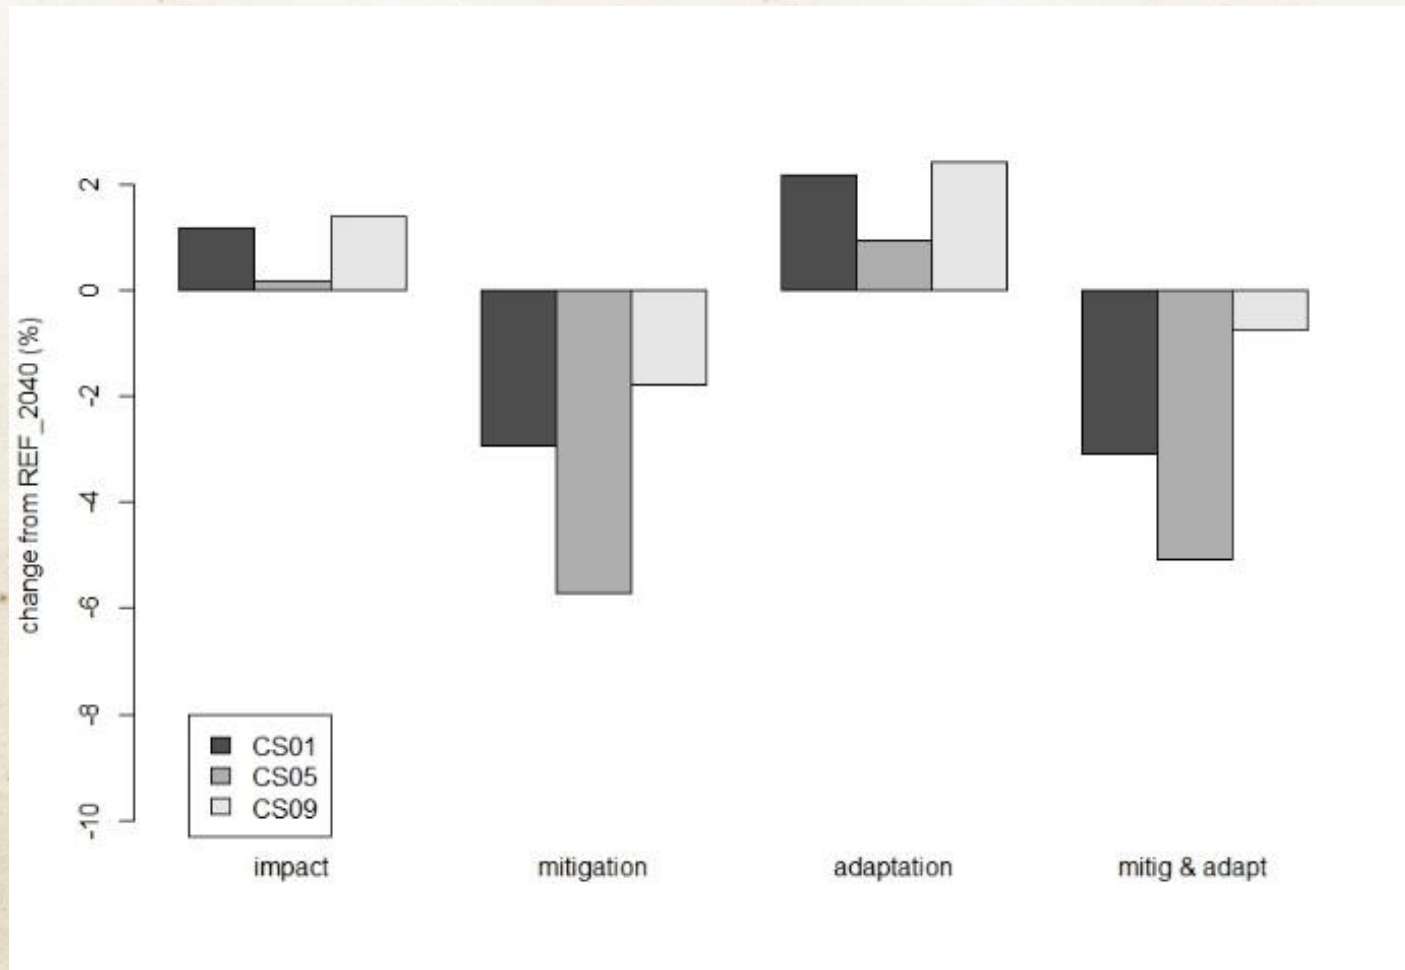

Results – soil management

Northern landscape

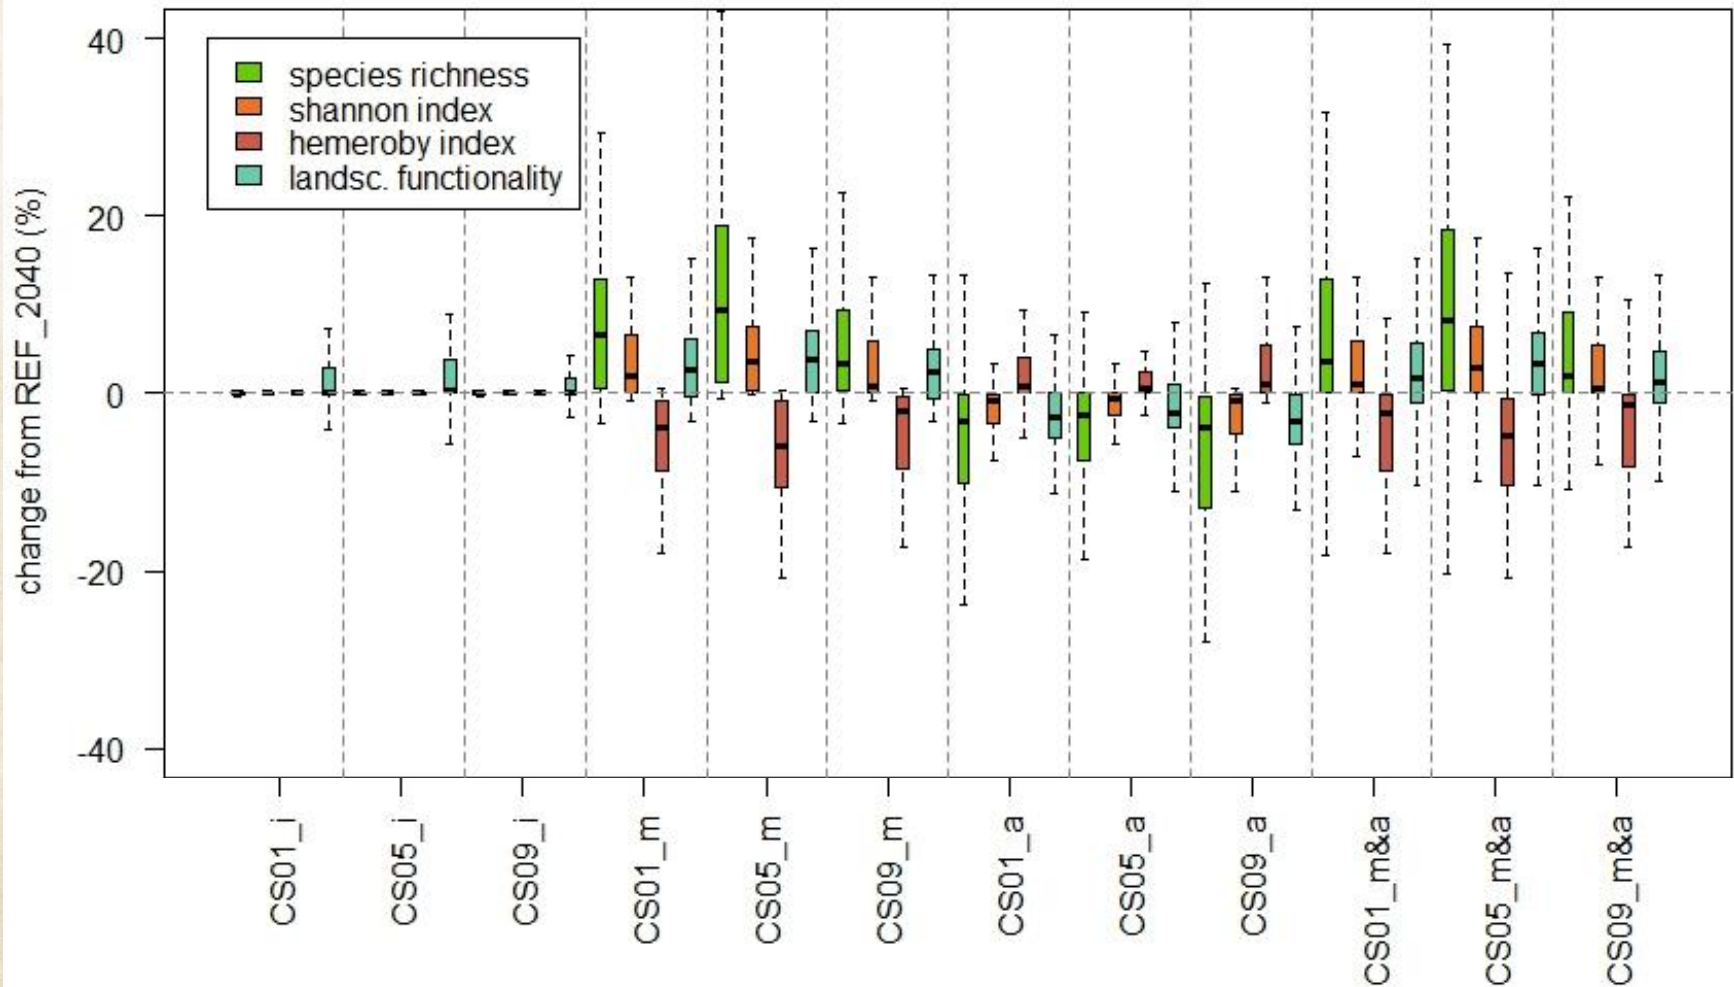

Results – changes in GHG emissions from climate change and policies

Northern landscape

Results - farm land biodiversity indicators from climate change and policies

Northern landscape

Results – ACVV* indicator for landscape appearance

Northern landscape – REF_2040

Northern landscape – CS09_m

* Agricultural crops and vegetables value

Discussion

- Increasing productivity from climate change on average in both landscapes
 - In line with some of the literature, but not all
 - What about extreme weather events?
- Increasing farm incomes on average from assumed mitigation and adaptation policies
 - Mitigation policy increases environmental quality at the cost of public budgets and agricultural production
 - Flexibility from adaptation shows trade-offs between ag. production and env. protection
- Location determines impacts
 - Heterogeneous climate change impacts among regions and farms
 - Not only latitude but altitude to be considered as well in impact studies

Conclusions

- High spatial resolution creates interfaces to disciplinary models and indicators
 - Challenging data demand
- Increasing productivity can increase intensification pressures
 - Threatened permanent (extensive) grasslands and landscape elements, but
 - subject to resource constraints, costs and prices
 - Future RDP and environmental policy design (e.g. WFD) should take changing productivity into account
- Future research: analyze uncertainties
 - Ensembles of crop and grassland models
 - Sensitivity analysis on economic input parameters
 - Alternative model settings to test model uncertainty
 - Expert survey on observed and expected changes to complement modelling
