

What is 4D4F ?

4D4F is a thematic network focused on developing a network for **dairy farmers, dairy sensor technology suppliers, data companies, agricultural advisors and researchers**, to explore ways to use data generated by dairy sensors. Current participants belong to 9 European countries.

Why is it important?

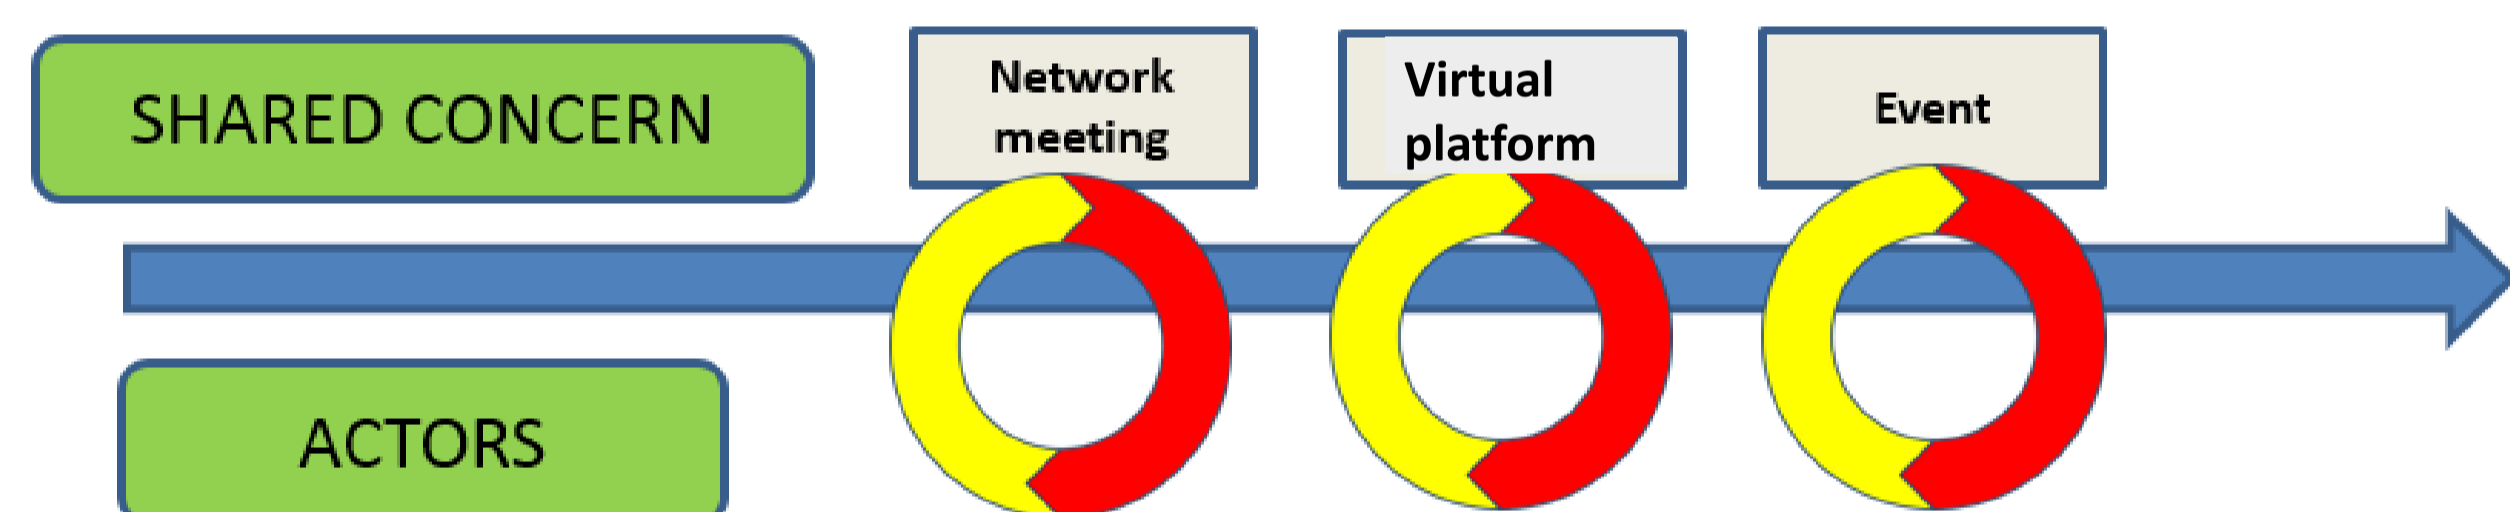

This topic is key to **the future productivity and sustainability of the dairy farming industry** across Europe and is directly relevant to a large proportion of the farming community, specially in large herds. There is a need to deliver improved farm performance by ensuring that the gap between research and practice is bridged.

Overall approach adopted

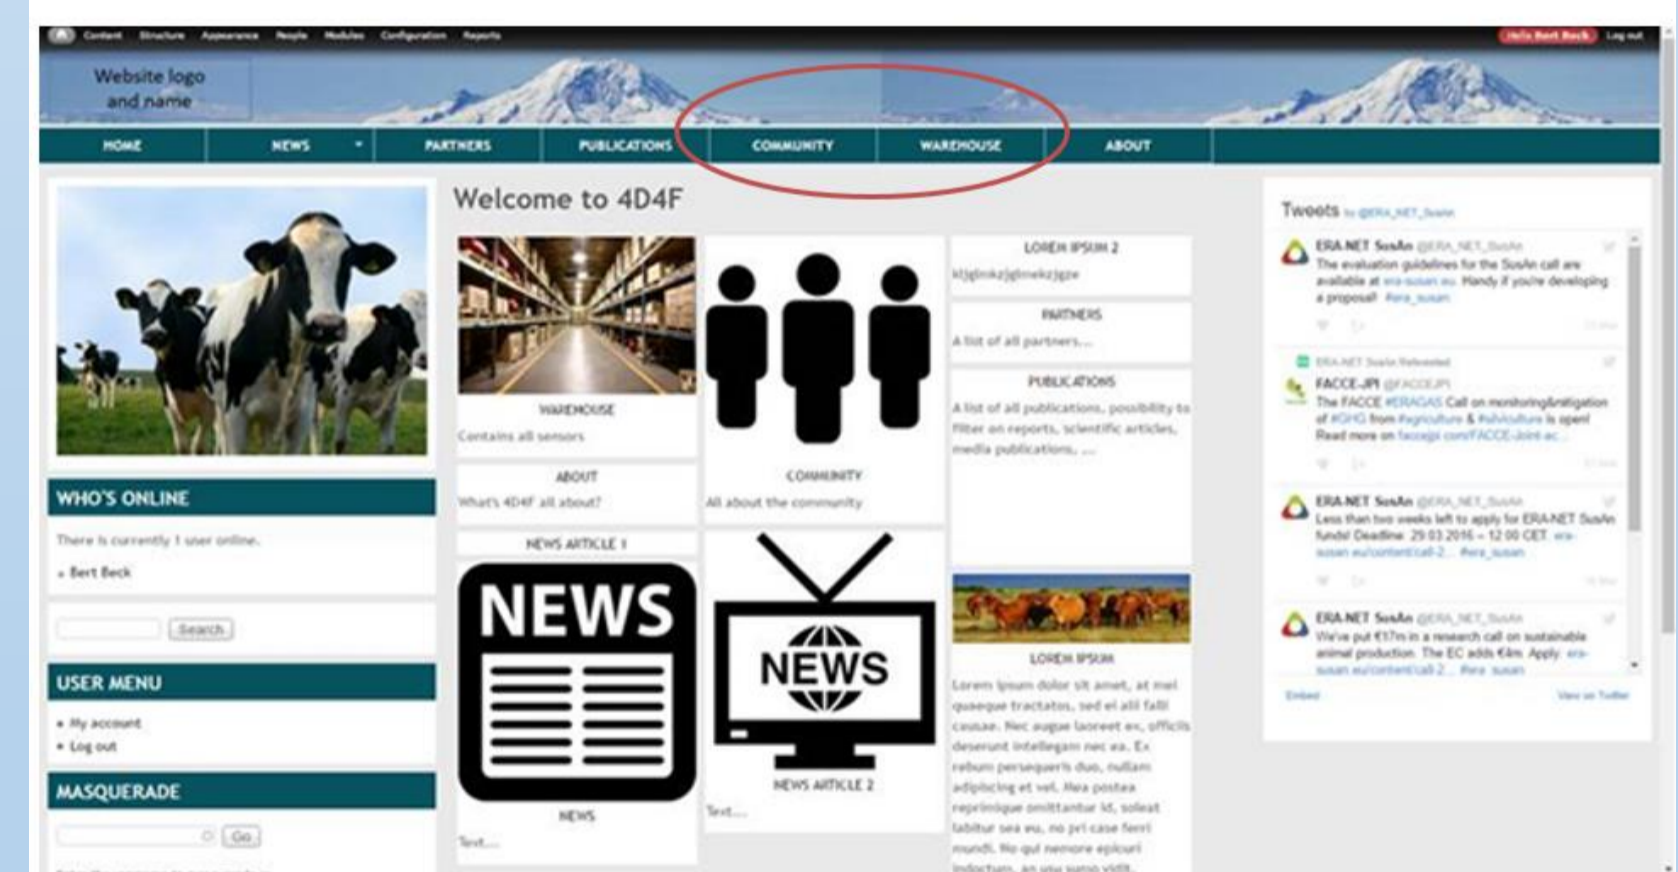

What is the approach?

- Bring together main actors, and build special interest groups (**SIGs**)
- Identify their needs
- Build a Community of Practice (**CoP**) based on collaborative work on sharing best practice

- Online presence (www.4d4f.eu) and a series of farm events and workshops.

What are the impacts ?

- Improved flow of information and knowledge between academia and practitioners
- Exchanges between European regions
- More efficient methods for innovation support services
- Collection and sharing of innovative knowledge
- Development of skills, education material, and SOPs
